

Dear Partners:

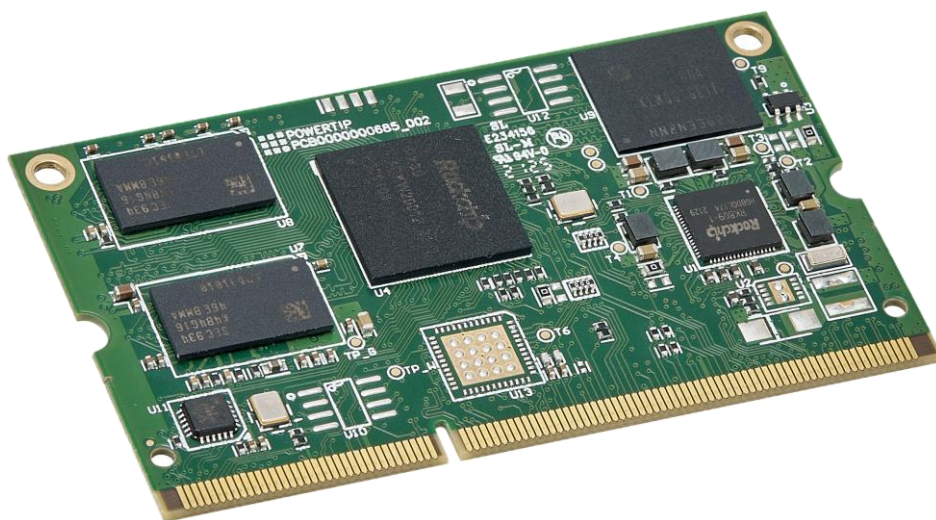

Powertip is thrilled to announce our 10.1" panel PC, P05DA0073 series with Rockchip PX30 is now CE certificated, also tested to comply with FCC standards, UKCA EMC Class-B.

Powertip's industrial panel PC comes with FCC and CE certifications that are well accepted around the world to ensure that the level of electromagnetic interference emitted from the device is based on the limit range that is approved by the Federal Communications Commission (FCC), meeting the health, safety, and environmental protection standards for Conformité Européenne (EC).

Additionally, our embedded system process and visualize real-time data from multiple sensors, demonstrating the effectiveness of the integrated approach in reducing development time and complexity while providing a flexible and scalable solution.

Aim towards comprehensive home automation, intelligent manufacturing, automation, smart city, medical and AI/IoT; by leveraging the IoT, Node-RED, MQTT tools and wireless sensor networks for enhanced control and connectivity. We shape the future with you.

Customization options are available, please contact with your sales representative for pricing and more information.
